McKee I'm a big fan of alternative number games - I LOVE Crazy Str8ts - but this one wasn't quite as much fun as I thought it would be. Each puzzle is a large grid with 25 squares and you use the number clues around the grid to determine which number goes in which square. Definitely uses different spatial thinking than Ken-Ken or Crazy Str8ts, and maybe I just don't have the right brain organization to really enjoy this. I've only done a few so far and will do a few more, and will add another comment if it grows on me. 0 of 0 people found the following review helpful. 1-to-25 By J A This was a new type of puzzle book for me. The puzzles are not as easy as you think. But they are fun. I hope I can find more books like this.

Here's how you solve the puzzle: place the numbers 1 to 25 into the grid, one number per box, so that consecutive numbers are connected vertically, horizontally, and diagonally. The numbers around the edge of the grid tell which row, column, or diagonal contains those numbers. Sounds simple, right? Wrong! As your path of numbers snakes around the grid, you will marvel at the subtle complexity that is 1-to-25.
