A First Book of Bridge Problems comprises fifty problems in declarer play and defense for the beginning player, presented in approximate order of difficulty, with emphasis on planning the play at the first trick. The hands are presented to the reader as they would encounter them playing at the table. Unlike in a textbook, where topics are introduced systematically, there is no clue as to what type of play is required. Experienced players recognize certain standard situations without having to work them out. This does not apply to novices, who spend a lot of mental effort on them. The book will help the novice player to develop their recognition of these situations. Winner of the 2012 ABTA Book of the Year of the Award!
